Skills

- HTML5
- CSS3
- Tailwind CSS
- JavaScript (ES6+)
- TypeScript
- React
- Flexbox
- Grid
- Responsive Design/UX
- Git
- Docker
- Databases
- PostgreSQL
- Git Bash
- Github
- Node.js
- Firebase
- REST APIs
- API Integration
- Python
- Django
- Debugging
- Code Review
- Performance Optimization

Summary

Full-stack software engineer with a strong focus on frontend development and AI-integrated applications. Experienced in building responsive, user-focused interfaces using React, JavaScript, and modern CSS, with backend exposure in APIs, databases, and cloud-based services.

Background in AI training and code evaluation at Outlier, working across frontend and full-stack systems to ensure accuracy, performance, and usability. Comfortable working with Docker-based environments, debugging complex systems, and integrating real-world data flows.

Passionate about creating clean, scalable applications that combine strong user experience with practical engineering solutions.

Experience

- Outlier AI

Remote

Software Engineer (AI Training & Evaluation)

May 2025-Present

 - Evaluated and refined AI-generated code across frontend and backend contexts, including React (JavaScript/TypeScript), HTML/CSS, and exposure to C++ and Java-based systems
 - Executed, tested, and debugged code within Docker-based environments, running scripts and validating outputs to ensure correctness against structured input specifications
 - Verified model-generated outputs against strict evaluation rubrics, ensuring logical accuracy, proper state handling, and expected behavior across edge cases
 - Identified and corrected UI/UX issues in frontend outputs, improving responsiveness, layout consistency, and overall usability
 - Analyzed system behavior and debugged failures across multi-language codebases, strengthening understanding of full-stack application flow
 - Used Git and Git Bash for version control, repository navigation, and managing evaluation workflows
 - Improved code quality by enforcing best practices in structure, readability, and maintainability across generated solutions
- Cloud Cores

Remote

Software Engineer Intern

Jan 2025-May 2025

 - Developed and maintained responsive frontend interfaces using React, HTML, CSS, and JavaScript to support user-facing features
 - Integrated Firebase services (authentication, database, and hosting) to support full-stack functionality and real-time data flow
 - Collaborated on UI/UX implementation by translating design requirements into functional, user-friendly components
 - Improved application performance and responsiveness across devices through debugging and optimization
 - Worked with version control (Git) to manage code changes and contribute to team-based development workflows
